

## The OSS Buy/Sell Signal Indicator

By The Options Signal Service <http://oss.cc>

I have been using this signal to time the entry and exit for putting on long trades for stocks and ETF's. It has been working well. Below are the trades that were closed over the last 30 days. Note: all trades are placed the night before to be executed at the Open.

While doing tonight's calculations, I noticed an extremely high number of Sell signals. That got me to thinking if the number of Buy and Sell signals per day could be used as an indicator for the stock market. So I whipped up a chart with the sum of buy and sell signals per day, and over-laid it on a chart of the SPX. OMG! See the next page.

If the blue line reached -3 or below, I added a red line. If the line reached 3 or above, I added a green line. Look at what the SPX did in the next few days following a red or green line.

AND LOOK WHERE THE COUNT IS TONIGHT!

This indicator will be added to the nightly *OSS Signal Service* and the *OSS Indicator Service*.
